SUMMARY

Software Engineer with 4+ years of experience building production fintech applications within a large multi-tenant platform. Strong frontend engineering background with TypeScript, Angular and React, alongside hands-on experience integrating frontend applications with Python/FastAPI backend services.

Experienced building production interfaces and end-to-end features involving authentication, RBAC, payments, financial workflows and configuration-driven multi-tenant platforms. Comfortable working across the full development lifecycle, from technical design and implementation through testing, code review and production delivery.

TECHNICAL SKILLS

- **Frontend:** React, Angular, TypeScript, RxJS, Tailwind CSS, Storybook, AG Grid, Angular Material, Figma
 - **Backend:** Python, FastAPI, REST APIs, Pydantic
 - **Data:** PostgreSQL, SQL
 - **Architecture:** Monorepos, multi-tenant platforms, RBAC, API integration
 - **Tools & Infrastructure:** Git, Docker, CI/CD, OpenTelemetry
 - **Testing:** Pytest, unit testing, integration testing
-

EXPERIENCE

Software Engineer - Abound | Mar 2022 – June 2026

Software Engineer on a large fintech monorepo supporting multiple white-labelled clients and financial products. Worked primarily across frontend engineering while progressively taking ownership of full-stack features spanning UI, APIs, business logic and configuration.

Frontend Engineering

- Built and maintained production frontend applications using **TypeScript, Angular and React**, working with complex forms, dashboards, data-heavy interfaces and API-driven workflows.
- Developed reusable UI components and application features using **Tailwind CSS, Storybook, AG Grid and Angular Material**.
- Worked extensively with configuration-driven UI and client-specific requirements within a shared multi-tenant codebase.
- Integrated frontend applications with REST APIs and backend services, handling authentication, loading states, validation, error handling and complex user workflows.
- Contributed to frontend architecture, refactoring and performance improvements across a large production codebase.

Greenfield Broker Portal

- Led development of a **new Broker Portal from the ground up**, including dashboard, broker search, navigation and role-based access control.

- Built frontend workflows in TypeScript and integrated them with Python/FastAPI backend services.
- Implemented **RBAC and permission enforcement**, ensuring users could only access appropriate data and functionality.
- Worked across frontend, API and configuration layers to deliver the product through to production.

Payments & Financial Workflows

- Built and shipped a **hosted payment-links system**, including dashboard-generated payment flows and integration with external payment-provider systems.
- Implemented payment UX including form handling, submission states, loading states, validation and error handling.
- Developed frontend workflows for financial operations including repayments, refunds, cancellations and facility actions.
- Worked with sensitive financial and authentication flows requiring careful permission and state management.

Multi-Tenant Platform

- Contributed heavily to a **white-labelled Open Banking journey** used across multiple client brands.
- Implemented client-specific branding, configuration and feature variations within a shared codebase.
- Worked across **10+ client configurations**, balancing reusable functionality with tenant-specific requirements.
- Developed and maintained UI behaviour across a complex multi-tenant fintech platform.

Full-Stack Development

- Progressed from a primarily frontend-focused role into ownership of **end-to-end production features**.
- Built and extended Python/FastAPI services, REST endpoints, service logic and Pydantic models supporting frontend functionality.
- Worked with authentication, session handling and backend RBAC enforcement.
- Wrote and maintained unit and integration tests using Pytest.
- Worked across frontend, backend, database and configuration layers to diagnose and resolve production issues.

SELECTED END-TO-END FEATURES

Facility Notes

- Built backend models, APIs and service logic using Python/FastAPI.
- Developed corresponding Angular frontend components and API integration.
- Added automated test coverage.

Self-Declared Income

- Delivered frontend form workflows and full frontend-to-backend integration.
- Worked on API migration and validation.

Premium Finance & Facility Actions

- Implemented frontend and backend functionality for repayment changes, BNPL cancellations and ledger-related operations.
-

SOFTWARE DEVELOPMENT & CAREER TRANSITION

Frontend Development — Self-Directed Training & Projects

2020 – 2022

- Transitioned into software engineering through intensive self-directed frontend development training.
- Completed multiple **Udemy courses covering JavaScript, React and modern frontend development**.
- Built and maintained a portfolio of small **React and JavaScript applications**, developing practical experience with component-based UI development, state management, API integration and responsive interfaces.
- Continued developing frontend skills through personal projects before entering professional software engineering.
